

# Technical Writing and Speaking in English

## TDTP : Writing a Scientific Introduction and Methodology.

Danilo Carastan-Santos

March 12, 2025

**Exercise 1: Write an introduction and a method section for MergeSort paper (or your internship pre-report).** Imagine that you were John von Neumann in 1945, and you devised a new sorting algorithm. You created MergeSort, and now you want to publish your work at a general Computer Science conference. For this task, you must follow the guidelines presented during class.

After finishing the paper, you will give it to another student for review. **You can use this time as an opportunity to work on your internship pre-report!** For this you just use your internship subject instead of MergeSort. (and you don't need to pretend to be John von Neumann in 1945, of course) :)

**Exercise 2: Reviewing a paper.** Receive a paper from one of the students and review it. Your review criteria must follow the guidelines presented during class. Identify the text regions where the criteria don't follow and try to give suggestions to improve the paper.
